95% detected as AI

The percentage indicates the combined amount of likely AI-generated text as well as likely AI-generated text that was also likely AI-paraphrased.

Caution: Review required.

It is essential to understand the limitations of AI detection before making decisions about a student's work. We encourage you to learn more about Turnitin's AI detection capabilities before using the tool.

Detection Groups

18 AI-generated only 95%

Likely AI-generated text from a large-language model.

0 AI-generated text that was AI-paraphrased 0%

Likely AI-generated text that was likely revised using an AI-paraphrase tool or word spinner.

Disclaimer

Our AI writing assessment is designed to help educators identify text that might be prepared by a generative AI tool. Our AI writing assessment may not always be accurate (i.e., our AI models may produce either false positive results or false negative results), so it should not be used as the sole basis for adverse actions against a student. It takes further scrutiny and human judgment in conjunction with an organization's application of its specific academic policies to determine whether any academic misconduct has occurred.

Frequently Asked Questions

How should I interpret Turnitin's AI writing percentage and false positives?

The percentage shown in the AI writing report is the amount of qualifying text within the submission that Turnitin's AI writing detection model determines was either likely AI-generated text from a large-language model or likely AI-generated text that was likely revised using an AI paraphrase tool or word spinner.

False positives (incorrectly flagging human-written text as AI-generated) are a possibility in AI models.

AI detection scores under 20%, which we do not surface in new reports, have a higher likelihood of false positives. To reduce the likelihood of misinterpretation, no score or highlights are attributed and are indicated with an asterisk in the report (*%).

The AI writing percentage should not be the sole basis to determine whether misconduct has occurred. The reviewer/instructor should use the percentage as a means to start a formative conversation with their student and/or use it to examine the submitted assignment in accordance with their school's policies.

What does 'qualifying text' mean?

Our model only processes qualifying text in the form of long-form writing. Long-form writing means individual sentences contained in paragraphs that make up a longer piece of written work, such as an essay, a dissertation, or an article, etc. Qualifying text that has been determined to be likely AI-generated will be highlighted in cyan in the submission, and likely AI-generated and then likely AI-paraphrased will be highlighted purple.

Non-qualifying text, such as bullet points, annotated bibliographies, etc., will not be processed and can create disparity between the submission highlights and the percentage shown.

RenewWaste: A Digital, Incentivised Recycling Platform for Urban Households and SMEs in Lagos, Nigeria

Strategic Innovation and Entrepreneurship

Waste2Wallet

Opening - The Pitch

- Lagos generates over 13,000-15,000 tonnes of waste daily, yet structured, incentivised recycling remains limited.
- A digital platform offering scheduled waste collection and reward-based recycling.
- Targets middle-income households and SMEs in Ikeja, Yaba, Surulere, and Lekki.
- Revenue comes from subscriptions, recyclable sales, and sustainability partnerships.
- Provides formalised collection, real-time tracking, and instant rewards, with phased market launch from months one to four.

Customer Jobs

Type of Job	Customer Need
Functional	Dispose of household and business waste conveniently without storage or odour issues
Functional	Access reliable and predictable waste collection services.
Emotional	Feel a sense of responsibility and contribution to a cleaner neighbourhood.
Social	Demonstrate environmental consciousness within their community and peer groups.

Waste2Wallet

Customer Pains

- Irregular waste collection, leading to odour, accumulation, and health hazards
- No accountability or tracking when collection fails
- Health risks from prolonged waste storage and pest infestation
- No financial return for separating recyclable materials, despite paying for disposal

Waste2Wallet

Customer Gains

A clean and healthy living environment with reduced waste accumulation (Schoeman and Rampedi, 2022)

Cash rewards for recycling, turning waste into a source of income (Ferronato and Torretta, 2022)

Time saved through reliable, scheduled pickup without repeated follow-ups (Faiz et al., 2024)

Peace of mind from knowing waste is disposed of responsibly (Roberts-Lombard and Jaiyeoba, 2025)

Social recognition within the community as environmentally conscious citizens (Etim, 2024)

Waste2Wallet

Product and Services

A mobile application for requesting waste pickup and tracking collection in real time

Scheduled waste collection service with fixed weekly pickup times

Weight-based instant Naira payment directly to user wallets within the app

Mobile airtime rewards are redeemable through loyalty points accumulated over time

SMS notification system for users without consistent smartphone access

Waste2Wallet

Pain Reliever

Fixed weekly pickup schedule,
eliminating uncertainty and
irregular collection

Real-time tracking within the
mobile app provides full
accountability

SMS notifications confirming
pickup completion and
payment status

Instant Naira payment upon
each collection, directly
addressing the absence of
financial return

Designated waste containers
provided to reduce storage
odour and pest risks

Waste2Wallet

Gain Creators

Instant Naira payout calculated by weight immediately after each collection

Loyalty points redeemable for mobile airtime, encouraging repeat usage

Transparent weight measurement displayed within the app after each pickup

Monthly recycling reports showing environmental impact (kilograms diverted from landfill)

Recognition badges within the app for consistent recycling behaviour

Conclusion

Two Greatest Challenges

- Integrating informal waste collectors without creating channel conflict or resistance, as these actors currently dominate Lagos waste collection and may perceive the platform as a threat to their livelihoods
- Achieving consistent user participation in a price-sensitive market where convenience and cost dominate decision-making over environmental awareness

Two Greatest Challenges

- Stakeholder negotiation to build trust and collaborative partnerships with informal collectors rather than displacing them
- Data analytics to track waste diversion metrics and user behaviour, enabling evidence-based decisions for improving retention and participation rates
